Objectives

The First International Conference on Algebraic Structures and Partial Differential Equations (ICAPDE' 2025) aims to advance research in both algebraic structures and Partial Differential Equations while exploring their fundamental connections. The conference will facilitate interdisciplinary dialogue between these fields, addressing theoretical developments and practical applications.

The conference will explore cutting-edge developments in algebraic methods - including symmetry groups, operator algebras, and non-associative algebras - alongside analytical and numerical approaches to PDEs, with particular attention to their applications in dynamical systems and mathematical physics. By bringing together algebraists and analysts, the conference seeks to stimulate new mathematical approaches, foster meaningful collaborations, and address contemporary challenges in pure and applied mathematics. The event will particularly highlight how algebraic methods can enhance PDE analysis while examining how PDE problems inspire new algebraic research directions.
